SSHOC

social sciences & humanities open cloud

Horizon 2020
European Union Funding
for Research & Innovation

Type of action & funding:
Research and Innovation action
(INFRAEOSC-04-2018)

Partners: 47

(20 beneficiaries + 27 LTPs)

SSH ESFRI Landmarks and Projects
& international SSH data infrastructures

Project budget:

€ 14,455,594.08

Duration: 40 months

(January 2019 – 30 April 2022)

Project website:
www.SSHOpenCloud.eu

Objectives:

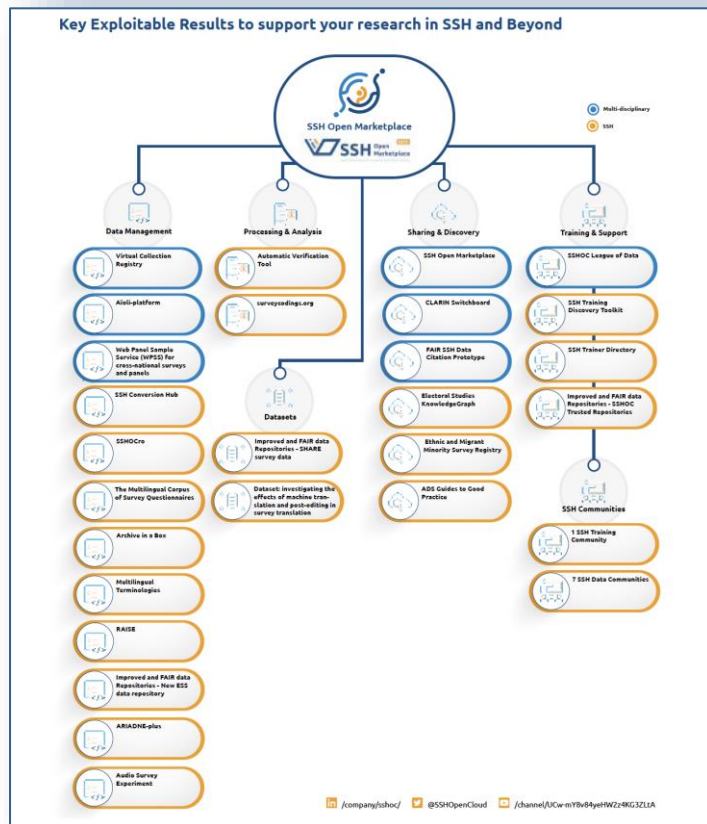

- creating the social sciences and humanities (**SSH**) part of European Open Science Cloud (**EOSC**)
- maximising **re-use** through **Open Science** and **FAIR** principles (standards, common catalogue, access control, semantic techniques, training)
- interconnecting existing and new infrastructures (clustered cloud infrastructure)
- establishing appropriate **governance model** for SSH-EOSC

What did SSHOC promise to do for EOSC?

“SSHOC will provide the social sciences, humanities, and heritage science contribution to the EOSC by:

- Interconnecting existing and new infrastructures to build the SSH Cloud
- Maximising data reuse through Open Science and the FAIR principles.
- Providing training resources, a training network, and training activities
- Setting up an appropriate governance model”

SSHOC project - Key Exploitable Results

Service Catalogue

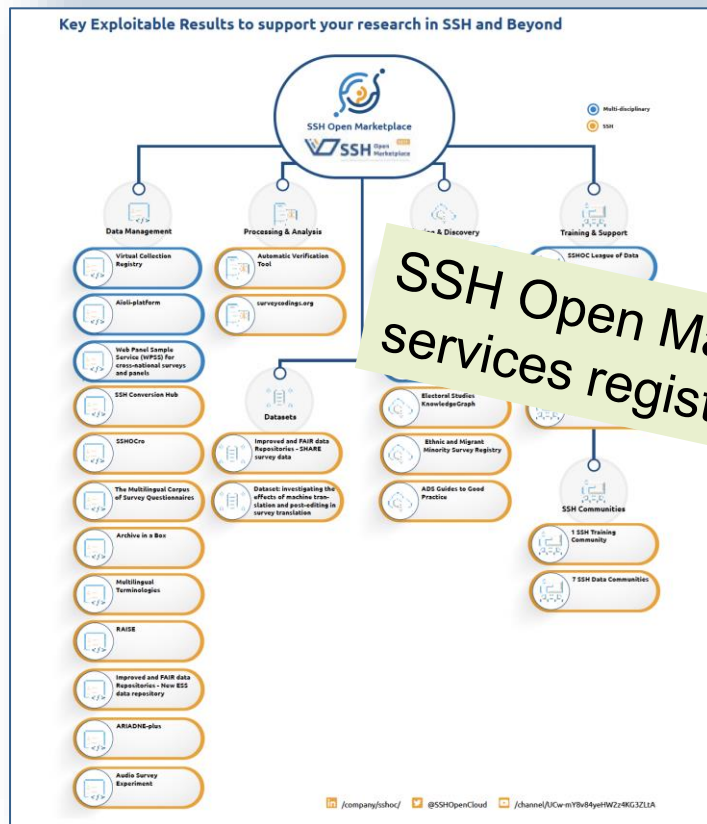

Home / Service Catalogue

Between January 2019 and April 2022 SSHOC delivers a series of services and tools for daily use by SSH researchers. All tools will be made available via the [SSH Open Marketplace](#) by April 2022.

SSH Open Marketplace, and several other services registered in EOSC Catalogue

New platform to accelerate social & cultural research

A network diagram composed of several wooden blocks and one red cube. The blocks are light-colored wood and feature a black silhouette of a person. They are interconnected by thin black lines, forming a web-like structure. The red cube is positioned at the top center and also has lines connecting it to other blocks. The background is a light, neutral color.

Realising the Social Sciences and Humanities Open Cloud

SSHOC Legacy Booklet

April 2022

From SSHOC to the SSH Open Cluster

Breaking down community silos to advance
Social Science and Humanities Research

Five European RI Clusters

Aligned agendas

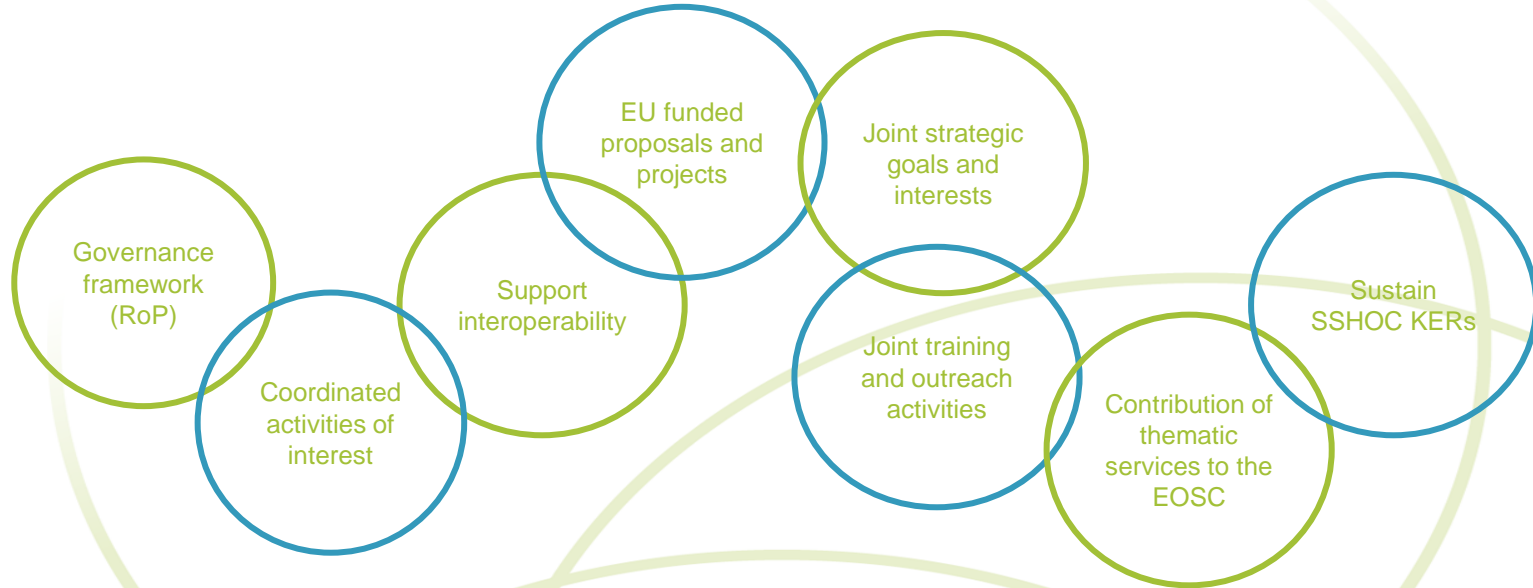

- Joint projects aimed at common value proposition for ERA and EOSC, e.g. HORIZON-INFRA-2023-EOSC-01-01
- Common web presence, white papers, etc.

Aligned activities

- Enhancement of interoperability of services to enable multi-disciplinary work
- Several pilot projects in project  EOSC Future (H2020)

Envisaged collaborative activities for the parties united under the label of SSH Open Cluster

Interconnecting existing and new infrastructures

Cluster collaboration of European RIs in SSH

Collaboration of all pan-European research infrastructures in SSH and their nodes

Support for research of cultural data, language data, survey data, and other relevant digital objects. Objectives:

- Federation of distributed SSH resources
- Discovery platform *SSH Open Marketplace*: [link](#)
- Methodological and legal/ethical frameworks, and workflows for the analysis of a.o. multilingual data, multimedia data, heterogeneous data, sensitive data, etc.

Societal impact agendas taking shape in the context of dedicated initiatives, such as

- Collaboration in EOSC Future (H2020) e.g. between
 - SSHOC and EOSC-Life (harmonised vocabularies for metadata)
 - SSHOC and ENVRI-Fair (climate neutral and smart cities)
- Challenge-driven funding schemes of Horizon Europe

META-COVID: An Empirical Case Study on COVID-19 Metadata

Contribution of TEXTUA -  Universiteit Antwerpen
CLIPS | Centrum voor Computerlinguïstiek
en Psycholinguïstiek &  ecrin to the ongoing H2020 project

What

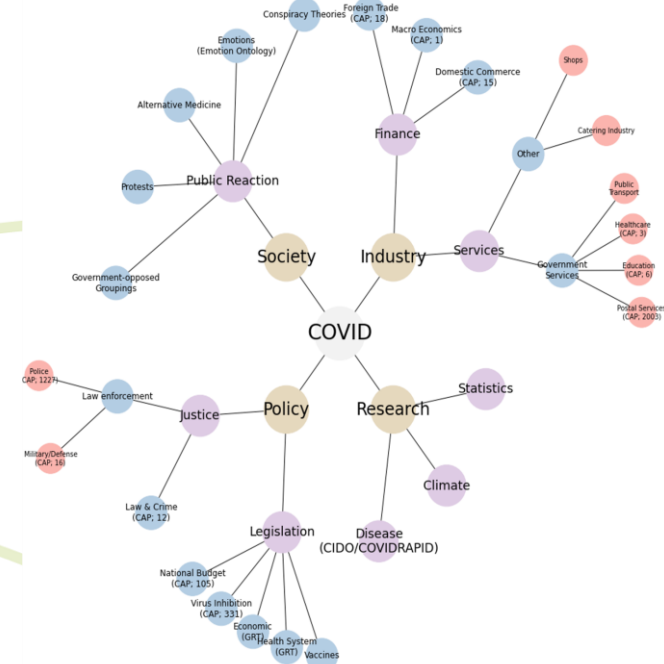

- Development of an ontology of COVID-related topics

Why

- Aimed at optimising cross-referencing across different scientific disciplines.
- Meant to be relevant for
 - better integration of information from public debate channels and the health domain
 - digital monitoring and analysis of the public debate

How

- State-of-the-art topic modelling techniques
- Integration of the extracted topics into the ontology.
- Validation of automatically labeling of parliamentary data, social media data and social survey data.

How the SSH agenda can benefit from RI support

- Better visibility and support for previously underexplored resources with huge potential for multidisciplinary work
 - Parliamentary records to study public debate on global issues in a multilingual context: COVID-19, climate change, migration
 - Heterogenous data collections that can be explored with tools for text and data mining (e.g., detection of disinformation, green washing etc.; mining of financial records; crowd control)
 - Speech data in multiple languages for developing models to be used by clinical practitioners for studying and treating speech disorders and early detection of Alzheimer
 - High-quality firm level data for Europe, through collaboration with RI initiative such as EURHISFIRM
- Interoperability can enable SSH to serve the HEU Missions and UN SDGs from many angles
- Many opportunities and resources have become available for training the new generations in digital scholarship and data science skills, all in line with the Open Science agenda.
